Boulevard General wahis 53 B-1030 Brussels , Belgium  
Tel: +(32)2.732.59.54 Fax: +(32)2.732.60.03

- Paraplegics paralyzed from the chest down, disabled or old people, who cannot stand or walk can all be helped by a device to stand up straight.
- **MARKUSH STAND** is able to help the disabled to stand up alone without the help of another person.
- The **MARKUSH STAND** supports the back, chest, knees and the soles. This kind of support makes standing up easy and secure. It enables the user to perform various tasks: reading, writing and watching, or exercising while standing up in **MARKUSH STAND**, with the hands free.
- Research demonstrated that the use of **MARKUSH STAND** by the adult residents of a nursing home who are unable to transfer or stand independently improved their muscle tone and ability, assisted them to stand up straight and even to walk.
- Studies demonstrate that use of a standing device by people with Code Injuries once or twice a week improves the function of the kidneys and the digestive system and reduce the number of bed sores.
- **MARKUSH STAND** is recommended by physiotherapist in hospitals and rehabilitation institutes as an efficient rehabilitation device.
