

# Press reduces environmental impact

 CCL Label has installed the Comexi OFFSET CI8 in its plant in Völkermarkt, Austria. As both companies seek maximum quality, sustainability and increase productivity in their products, the CI8 is a suitable solution to strengthen CCL's position as an environmentally responsible printer while responding to customer's stringent demands.

With the CI8 it is possible to carry out just-in-time design changes together with fine-tuning and fast production - a key factors in CCL's decision to acquire this machine. This flexibility is achieved thanks to the central drum offset technology system combined with automatic sleeve change..

Offset technology is not new for CCL Group as it already has high expertise capabilities with certain label products. In this case the CI8 will provide increased capacity, allowing new products and a wider range of substrates to be printed with offset high quality.

The CI8 marks a turning point in the printing of flexible packaging and labels. The first web-offset press for printing variable lengths over a central impression

*Among its main benefits, the CI8 reduces environmental impact due to the use of solventless inks and better energy efficiency*

drum it combines the advantages of both offset variable print length and flexo central impression drum printing in one press for flexible packaging and labels. This combination overcomes the issues found with conventional in-line offset machines because it can easily print thinner and more elastic materials including OPP, PET and PE.

Among its main benefits, the CI8 sharply

reduces environmental impact due to the use of solventless inks, better energy efficiency, highest print quality, broad / wide production flexibility and quick response regarding time-to-market.
